

## THE LESTAUSA ADVANTAGE

**Our finishing solutions use proven European self-learning robotic technology that has been adapted within the DeGeest production environment so manufacturers can thrive in a range of applications.**

The entire solution is then integrated by DeGeest for peace of mind. That means expert training and support by a team of craftsmen with a deep bench of knowledge and experience. DeGeest is the only integrator that uses what it sells in its own production environment to elevate the entire system beyond just a robot's path generation.

## NOT YOUR TYPICAL ROBOT

### Simple

While traditional robotic technology can be complex and intimidating, LestaUSA allows manufacturers to take advantage of robotic finishing quickly and easily because no advanced programming skills are needed. It's so easy, you can be finishing robotically on Day One following installation.

### Versatile

Whether it's continuous, power & free, batch or cart, Lesta robotic technology works with any new or existing system.

### Self-Learning

Lesta self-learning robots and solutions allow finishers to be able to teach the robot how to coat complicated parts in a weightless self-learning mode allowing precise control of every gun angle, trigger pull, path speed and spray technique recorded in real time and saved for future use.

## NOT YOUR TYPICAL INTEGRATOR

### Proven

Solutions are born in a production environment. Each Lesta system is built and tested at DeGeest to ensure all components work together after they're installed.

### Experienced

Installation, training and support are delivered by an experienced in-house team.

### Robust

Robots are more than a standalone; they're skillfully integrated with system and equipment partner components for a more robust solution.
